

Project Information (June 2026)

1. We are continuing the implementation phase of the project solutions (*beginning of June*). Please, remember that informing the instructor about the current state of the project, obtained results, and overall progress is mandatory: via MS Teams/e-mail: pieta@agh.edu.pl or during consultations (*once a week*).
2. An important stage of the work is the preparation of complete project documentation: the Final Report, a presentation for the audience/instructor, and delivery of the program/project source code.
3. The Final Report should include the following information:
 - a) team members and project topic – on the first page,
 - b) problem description,
 - c) literature review: *State of the Art*,
 - d) definition of agents (description of your approach),
 - e) detailed description of the program/simulator/application (e.g. *GUI*) together with example execution sessions,
 - f) in-depth analysis of the obtained data/results (e.g. the influence of parameterization on simulation outcomes), including commentary and correct interpretation of the results. This is a very important section! Missing, incorrect, or overly superficial interpretation of the obtained results will result in a lower grade,
 - g) conclusions and *Further Research* – possible directions for extending the project (e.g. the use of ML), ethical aspects of the project, additional remarks, and explanations.
4. The project topics differ in terms of both implementation difficulty and subject matter... If you have any doubts regarding the Report requirements in relation to your own topic, please contact me as usual.

Additionally, you may reuse materials from steps 2 and 3 (copy and *modify* them as needed). In the case of *modifications* to the original versions, e.g. adding newer publications or changing the topic during the project, please also contact me so that I can review the modified content before it is uploaded to UPEL.
5. The presentation of the results should be delivered either in front of the audience during meetings or individually. I strongly encourage you

to prepare several slides containing the most important information about the project and the obtained results.

In particular, instead of slides, you may present a working application and describe its functionality and results.

Please keep the presentation time within 5–7 minutes maximum.

- 6. The conditions for passing the project include delivering source code that satisfies the project requirements, submitting the Final Report and giving the presentation (by the whole group or a group representative).**
- 7. The assessment will primarily focus on the completeness and compliance of the implemented solution (regardless of the programming language/tools used) with the project requirements, as well as on the correctness of conclusions drawn from data analysis and experiments. The difficulty level of the project and the visual quality of the solution will also be taken into account.**
- 8. Presentation language: English or Polish.**
- 9. The Final Report must be written in English.**
